EXTRACTING DATA FROM THE WEB

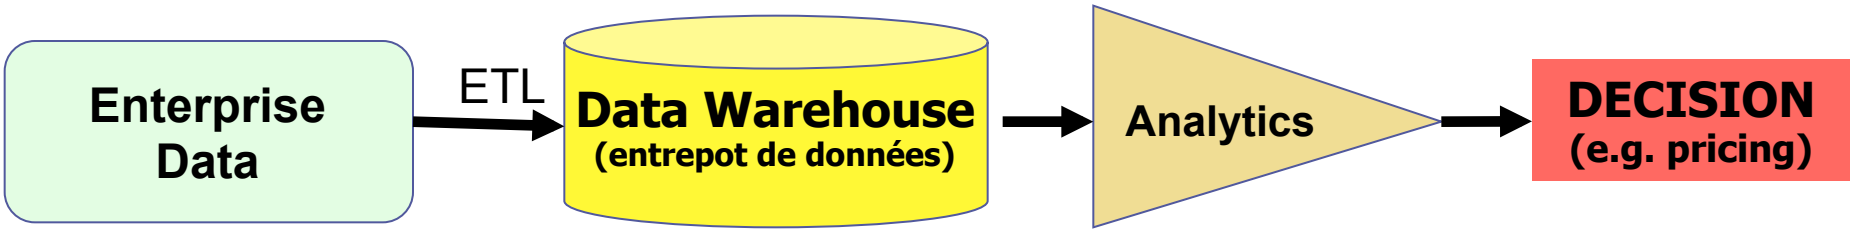
Georg Gottlob

Oxford University

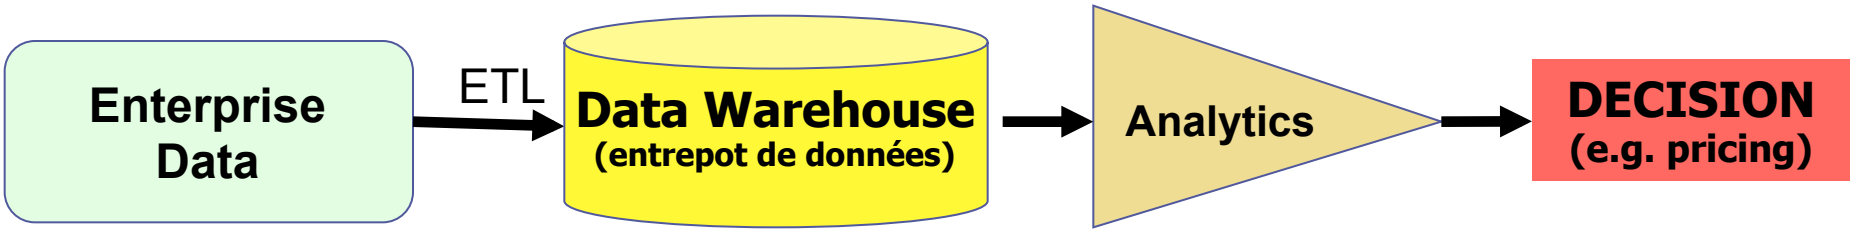
Talk Outline

- Motivation: need of information extraction
- Logical foundations of information extraction
- The Lixto Visual Wrapper
- The Diadem Project

Traditional data-based decision making in enterprises.



Traditional data-based decision making in enterprises.



But often the most relevant data are outside the company, **on the Web!**

→ Online data intelligence, online market intelligence, automatic web data extraction.

Online Market Intelligence (OMI)

(surveillance du marché)

- **Electronics Retailer (**détaillant d' électronique - composants**) :**
  market overview, 20 competitors, 200,000 products/prices

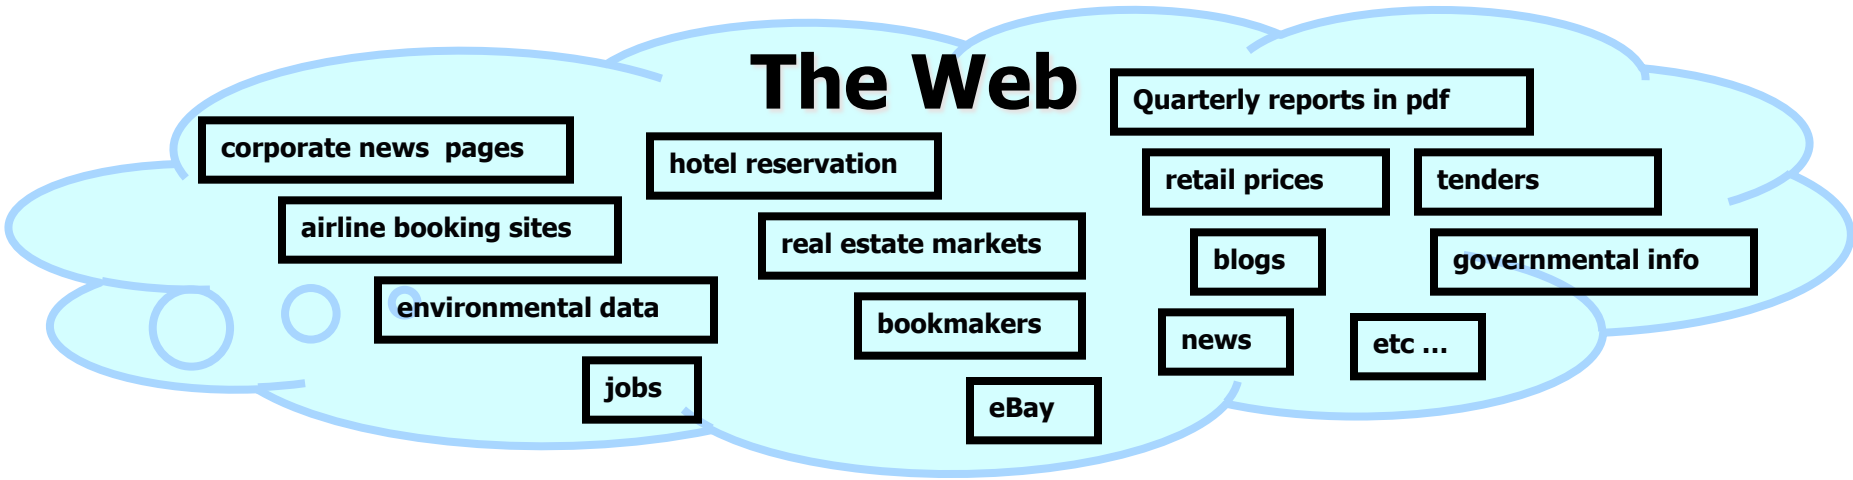
- **Supermarket Chain:** Price comparison; must quickly react to special offers (offres spéciales) , new products,…

- **Internet Travel Agency:** Gives best price guarantee, wants to detect "pricing attacks",…

- **Road Construction Company:** Find new public tenders ("appels d' offre")

- **Hedge Fund** ("fonds de placement"): Obtain recent house price changes from real-estate agent' s Web pages before the weekly index is published. Anticipating the Consumer price index (index des prix à la consommation).

- **Governmental/Policy Making ….**



The Web
corporate news pages
airline booking sites

Our offer of 195/65 R15 H
brand
profile size speed
price
Maximum 10 tyres will be displayed
Goodyear*** Summer tyres
EAGLE NCT 5
195/65 R15 91V
With mytyres.co.uk only £ 44,10
Details Save for later Buy now
The proposed tyres could achieve higher speeds than those you are searching for. You can use these tyres without any hesitation
Dunlop*** Summer tyres
SP SPORT 01
195/65 R15 91H
With mytyres.co.uk only £ 44,30
Details Save for later Buy now
Pirelli*** Summer tyres
P 6000 Powergy
195/65 R15 91H
With mytyres.co.uk only £ 44,70
Details Save for later Buy now
Continental*** Summer tyres
EcoContact CP
195/65 R15 91H runout,
With mytyres.co.uk only £ 46,00
Details Save for later Buy now
Bridgestone*** Summer tyres
Turanza ER 31
195/65 R15 91H
With mytyres.co.uk only £ 46,50
Details Save for later Buy now
Michelin*** Summer tyres
Pilot PRIMACY
195/65 R15 91H
With mytyres.co.uk only £ 56,40
Details Save for later Buy now
Goodyear*** Summer tyres
EAGLE NCT 5
195/65 R15 91H
With mytyres.co.uk only £ 44,20
Details Save for later Buy now
Pirelli*** Summer tyres
P 6000 Powergy
195/65 R15 91H
With mytyres.co.uk only £ 44,70
Details Save for later Buy now
Dunlop*** Summer tyres
SP SPORT 200
195/65 R15 91H E
With mytyres.co.uk only £ 46,40
Details Save for later Buy now
Pirelli*** Summer tyres
P 6
195/65 R15 91H
With mytyres.co.uk only £ 46,70
Details Save for later Buy now
10 tyres from 118 were displayed. (1 - 10)

Different approaches in the past

- **Programming** (Java, Perl, WebL, SQL+...)
  - very complicated & boring & expensive
  - testing very difficult
- **Simple Screen scrapers** ("gratte-écran")
  - no complex data structures extracted

- **Wrapper induction** (apprentissage d'adapteurs)
  - requires larger amounts of sample data
  - precision often not satisfactory
  - current systems text-based (not tree-based)

Different approaches in the past

- **Programming** (Java, Perl, WebL, SQL+...)
  - very complicated & boring & expensive
  - testing very difficult
- **Simple Screen scrapers**
  - no complex data structures extracted
- **Wrapper induction**
  - requires larger amounts of sample data
  - accuracy not satisfactory in all situations
  - current systems text-based (not tree-based)

Modern Solutions

- **Semi-automatic tool (outils)** 

  - based on solid theory
  - modular knowledge representation
  - easy to use
  - commercial product since 2002

- **Fully automated extraction** 

  - for specific application domains
  - extracts from 1000s of websites
  - current research

Talk Outline

- Motivation: need of information extraction
- Logical foundations of information extraction
- The Lixto Visual Wrapper
- The Diadem Project

Web documents are trees !

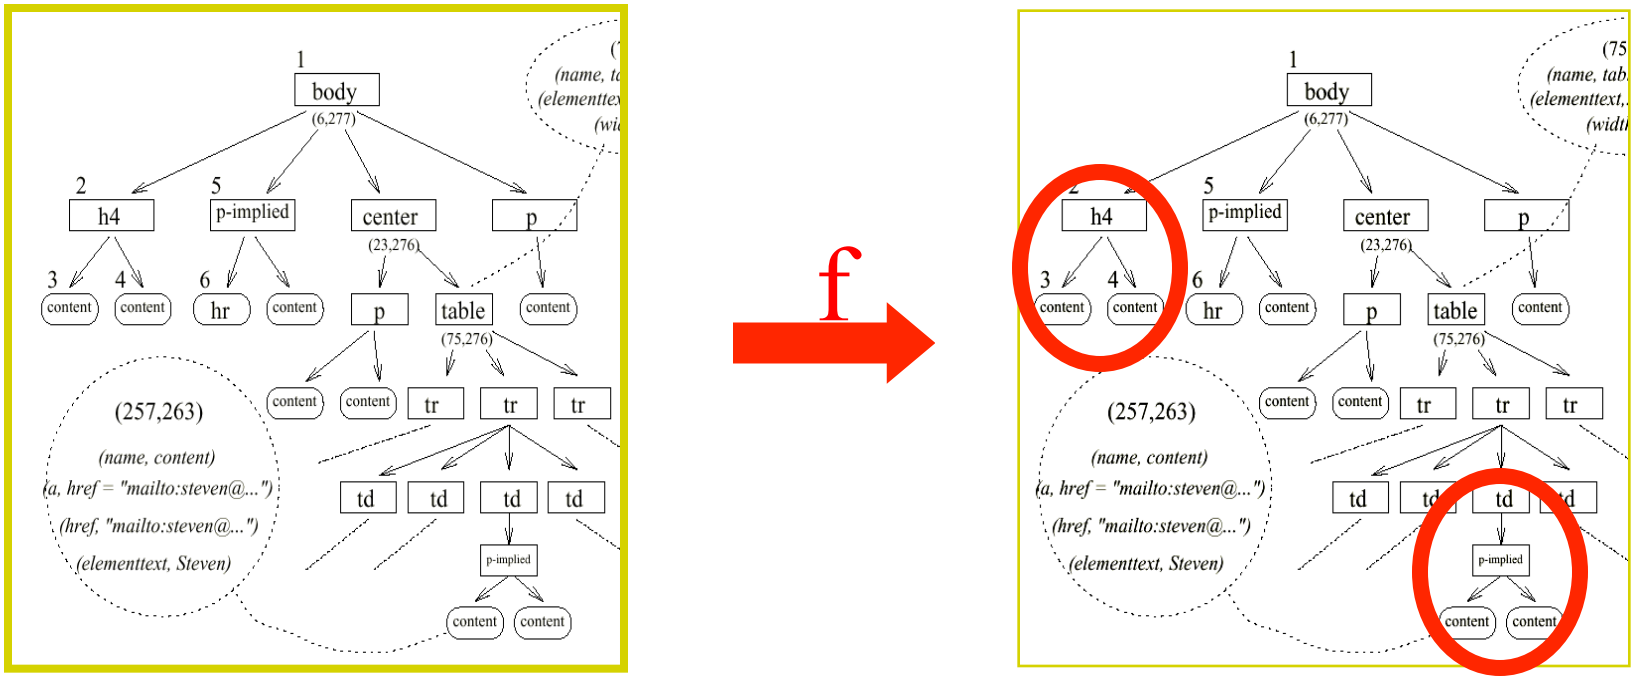
HTML: Hypertext Markup Language

XML: Extensible Markup Language

HTML, XML: Context free* languages. Represent a document by its parse tree (arbre syntaxique).

HTML Content Extractor

Function f: HTML Parse tree → Subtrees



Leaves of subtrees are among leaves of orig. tree

The Essence of Web Wrapping ?

Functional view: Wrapper defines functions f

$$f: \text{Tree} \rightarrow \mathcal{P}(\text{Tree})$$
$$t \rightarrow T \subseteq \text{subtrees}(t)$$

Equivalent logical view:

Wrapper defines monadic predicates P over the nodes (arbre dom) **of each input document**

Expressiveness Yardstick: MSO

- MSO captures exactly the essence of data extraction:
  - Define sets of nodes of a document

- Expressiveness, complexity, semantics well understood:
  - ✓ MSO over trees: perfect logical semantics
  - ✓ MSO over trees: high expressive power (tree automata)
  - ✓ MSO over trees: low data complexity

- Drawbacks: - hard to use, no visual specification,
  - high query complexity (cpl. de requetes)

  (➔ bad scalability, mauvais passage à l'échelle).

MSO on strings and trees

Rich theory:

- Büchi: MSO = REG over strings (chaînes de caractères)
- Thatcher and Wright, Rabin:

  MSO = REG over ranked trees (arbres bornés)

  = tree automata
- Brüggemann-Klein/Wood/Murata:

  MSO = REG over unranked trees
- Neven & Schwentick: Unranked Query Automata
- Courcelle: MSO in LinTime on tree-like structures

  (treewidth <= k, data complexity)

Ordered Trees as finite structures

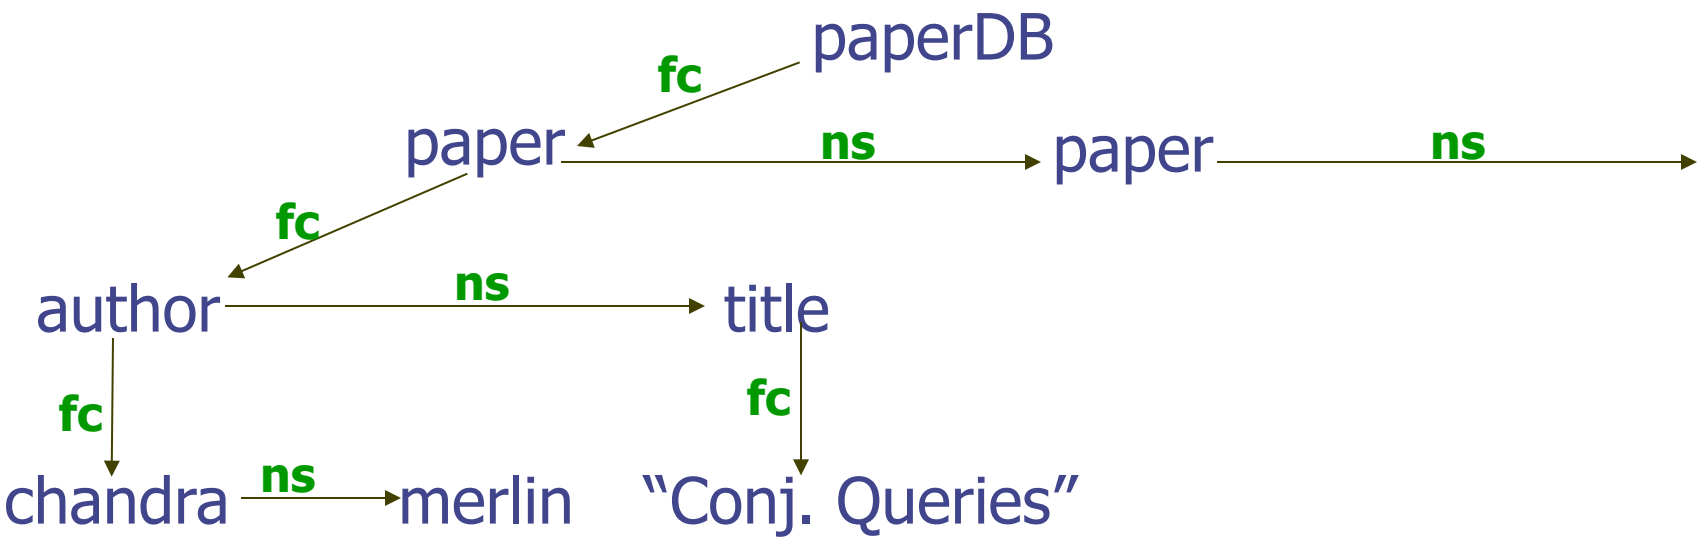
Monadic Datalog over XML



Select titles of articles authored by Chandra and Merlin

paper(X) ← root(R) & firstchild(R,X).
paper(X) ← paper(Y) & nextsibling(Y,X).

output(X)← paper(P) & firstchild(P,A) &
firstchild(A,Z) & label[Chandra](Z) &
nextsibling(Z,V) & label[Merlin](V) &
nextsibling(A,T) & firstchild(T,X).

How expressive is monadic Datalog?

It was known that over arbitrary structures:

- Monadic Datalog $\subseteq \Pi_1$-MSO
- Full Datalog = P (in presence of order)

Theorem [G. & Koch 2002]:

Over trees, monadic Datalog = MSO

A unary query is definable in MSO iff it is definable via a monadic datalog program.

How complex is Monadic Datalog?

Theorem [G. & Koch 2002]:

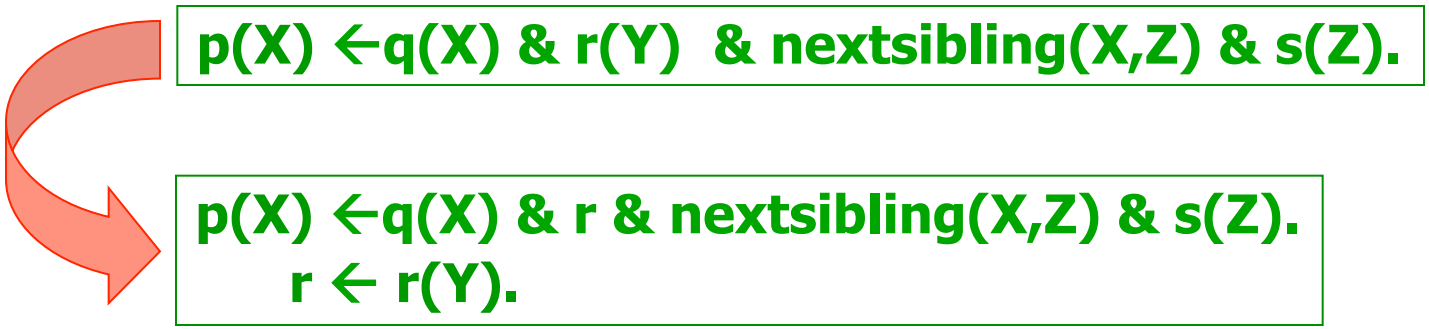
Monadic Datalog over trees has
combined complexity: $O(|data| * |query|)$

Query Complexity: P-complete and linear-time.

Proof idea:

1.) Transform datalog program + input tree in linear time into a "ground" propositional logic program (programme Datalog instancié)

- Exploit functional dependencies:
  nextsibling(X,Y) has only a linear number of ground instances: nextsibling(n_i,n_j), etc.
- Decouple independent atoms of rule bodies



2.) Execute ground program in linear time by using well-known algorithms: [Beeri&Bernstein][Dowling&Gallier] [Minoux]

Lixto Visual Wrapper

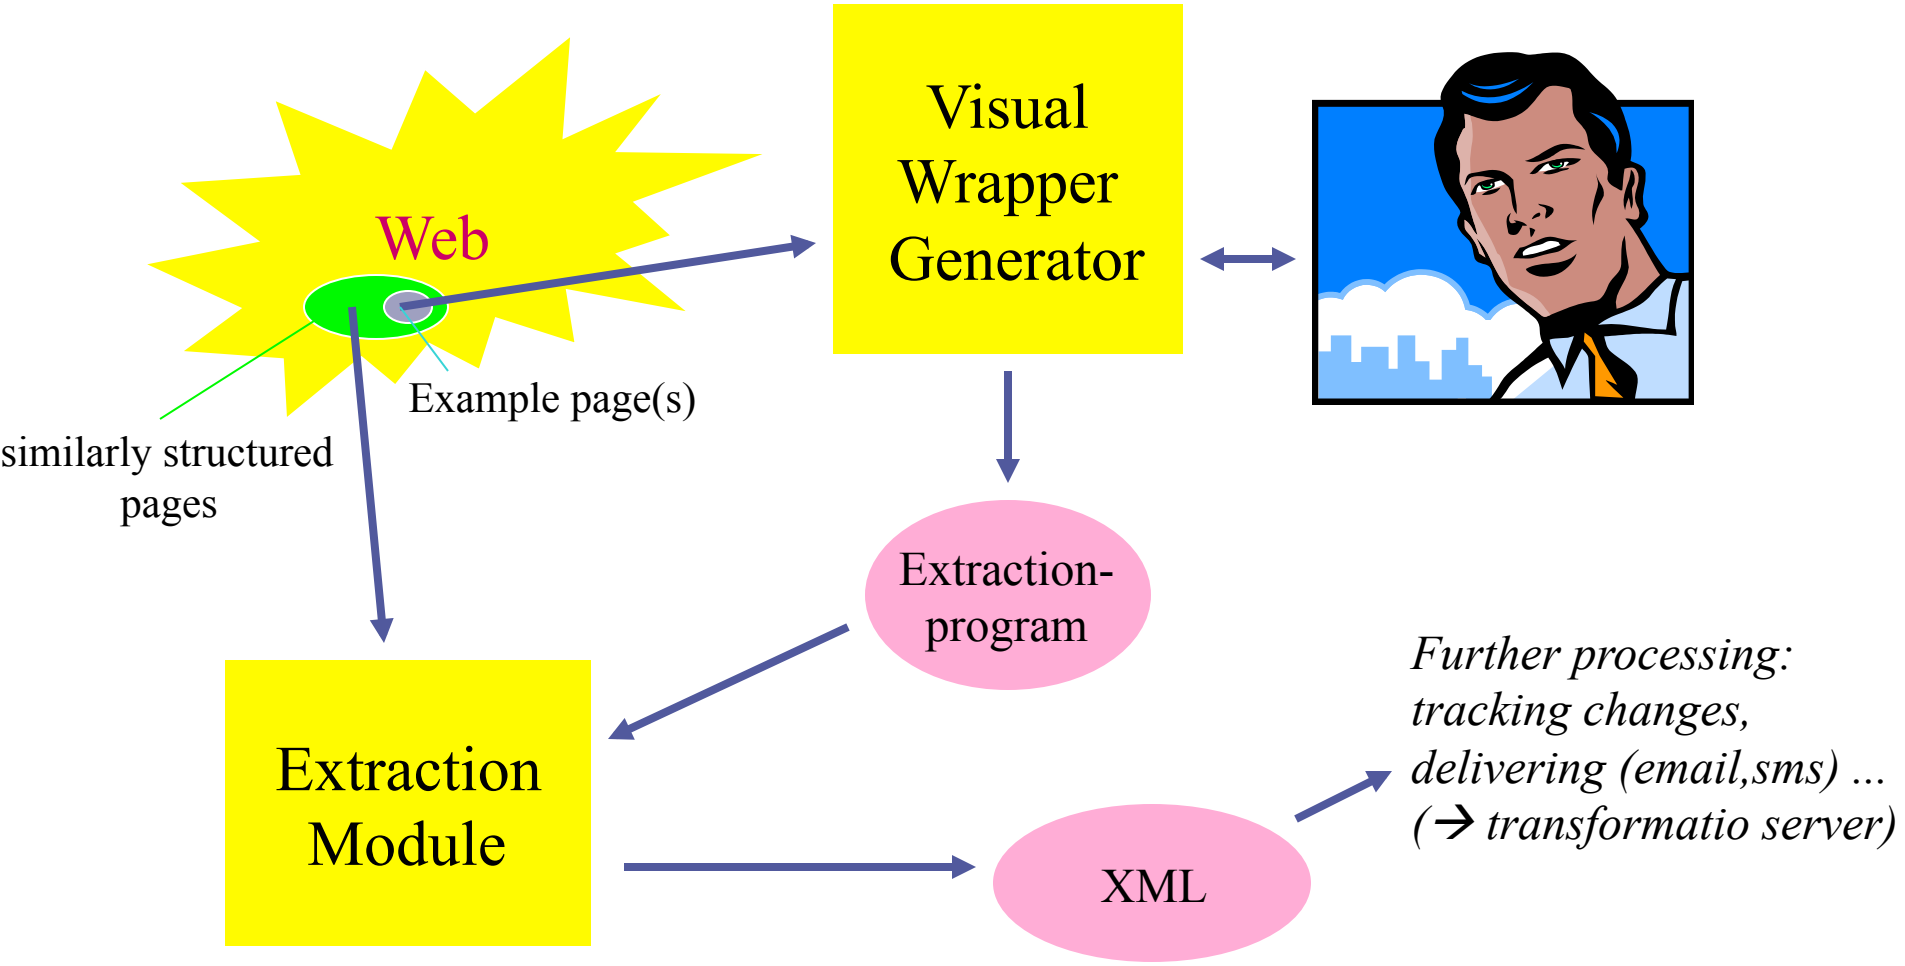
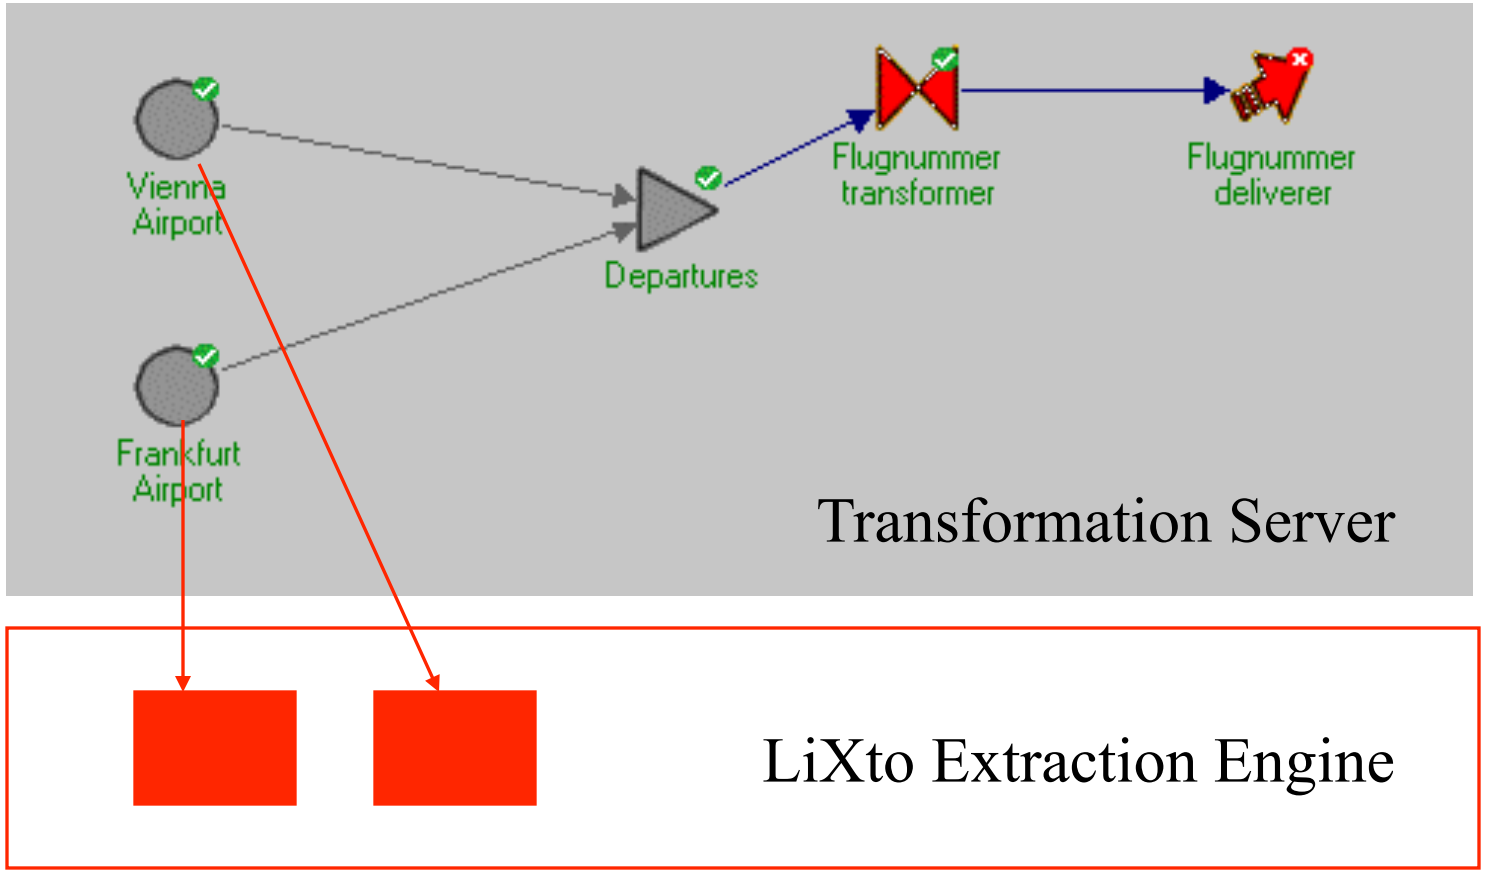
(outil: suite logicielle)

Lixto Visual Wrapper Architecture



Product Architecture



SHORT DEMO

Talk Outline

- Motivation: need of information extraction
- Logical foundations of information extraction
- The Lixto Visual Wrapper
- The Diadem Project: Fully automatic data extraction

Need for Automatic Extraction Technology (2)

All search engine providers need it! Many work on it.

Keywords: → Vertical search,
→ object search,
→ semantic search.

Raghu Ramakrishnan, Yahoo!, March 2009:
"*no one really has done this successfully at scale yet*"

Alon Halevy, Google, Feb. 2009: "*Current technologies are not good enough yet to provide what search engines really need. […] any successful approach would probably need a combination of knowledge and learning.*"

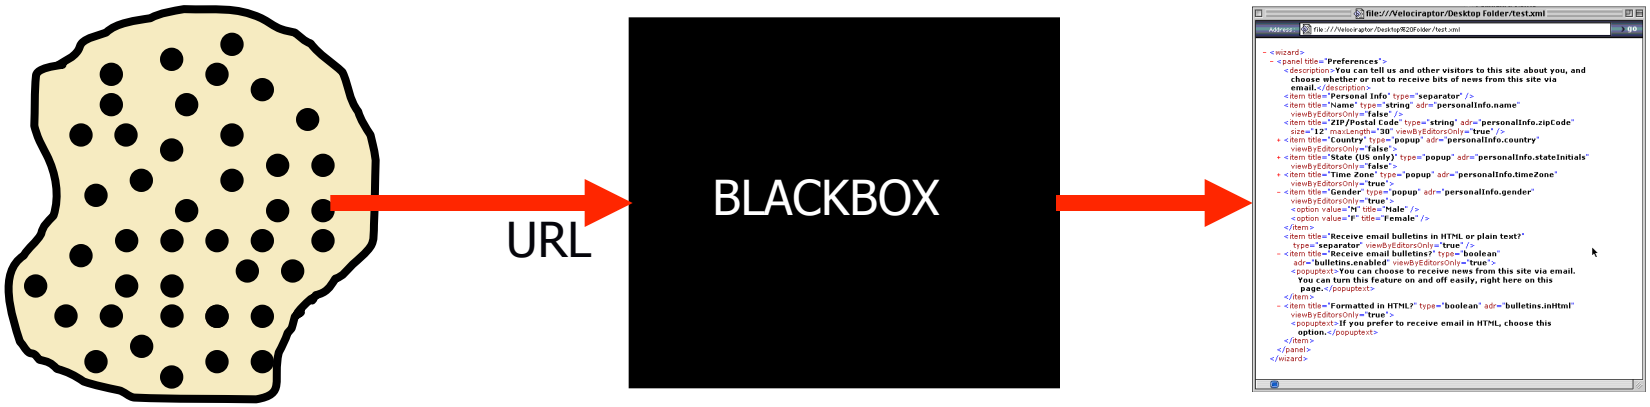
The Blackbox we are constructing



Application domain with thousands of websites

Application relevant Structured data (XML or RDF)

To achieve this, we combine a host of annotators with a new knowledge-based approach.

How to achieve it?

Combine existing and new “low level” annotators with “high level” AI and reasoning.

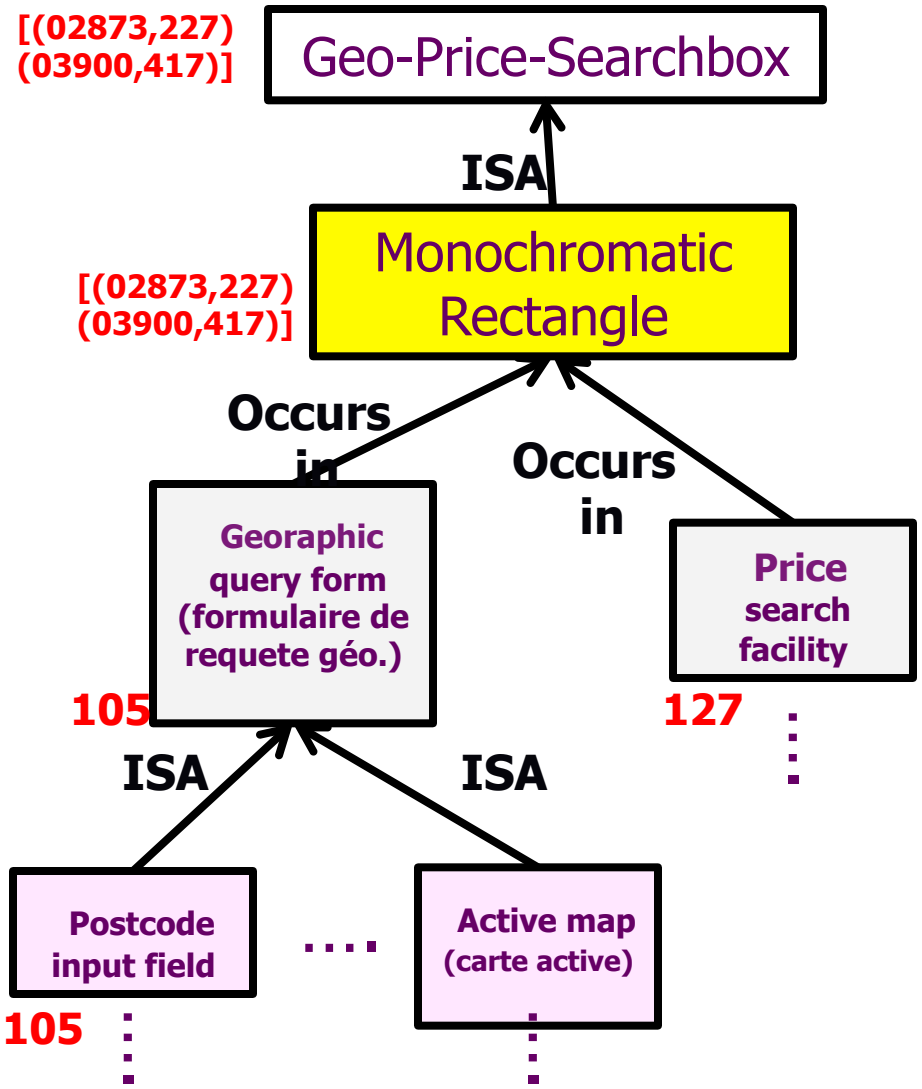
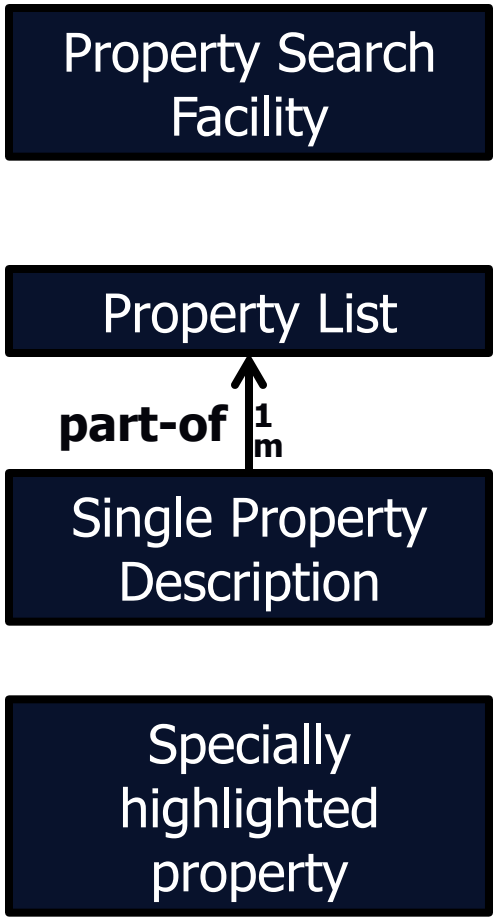
Bottom-up (low-level) annotation

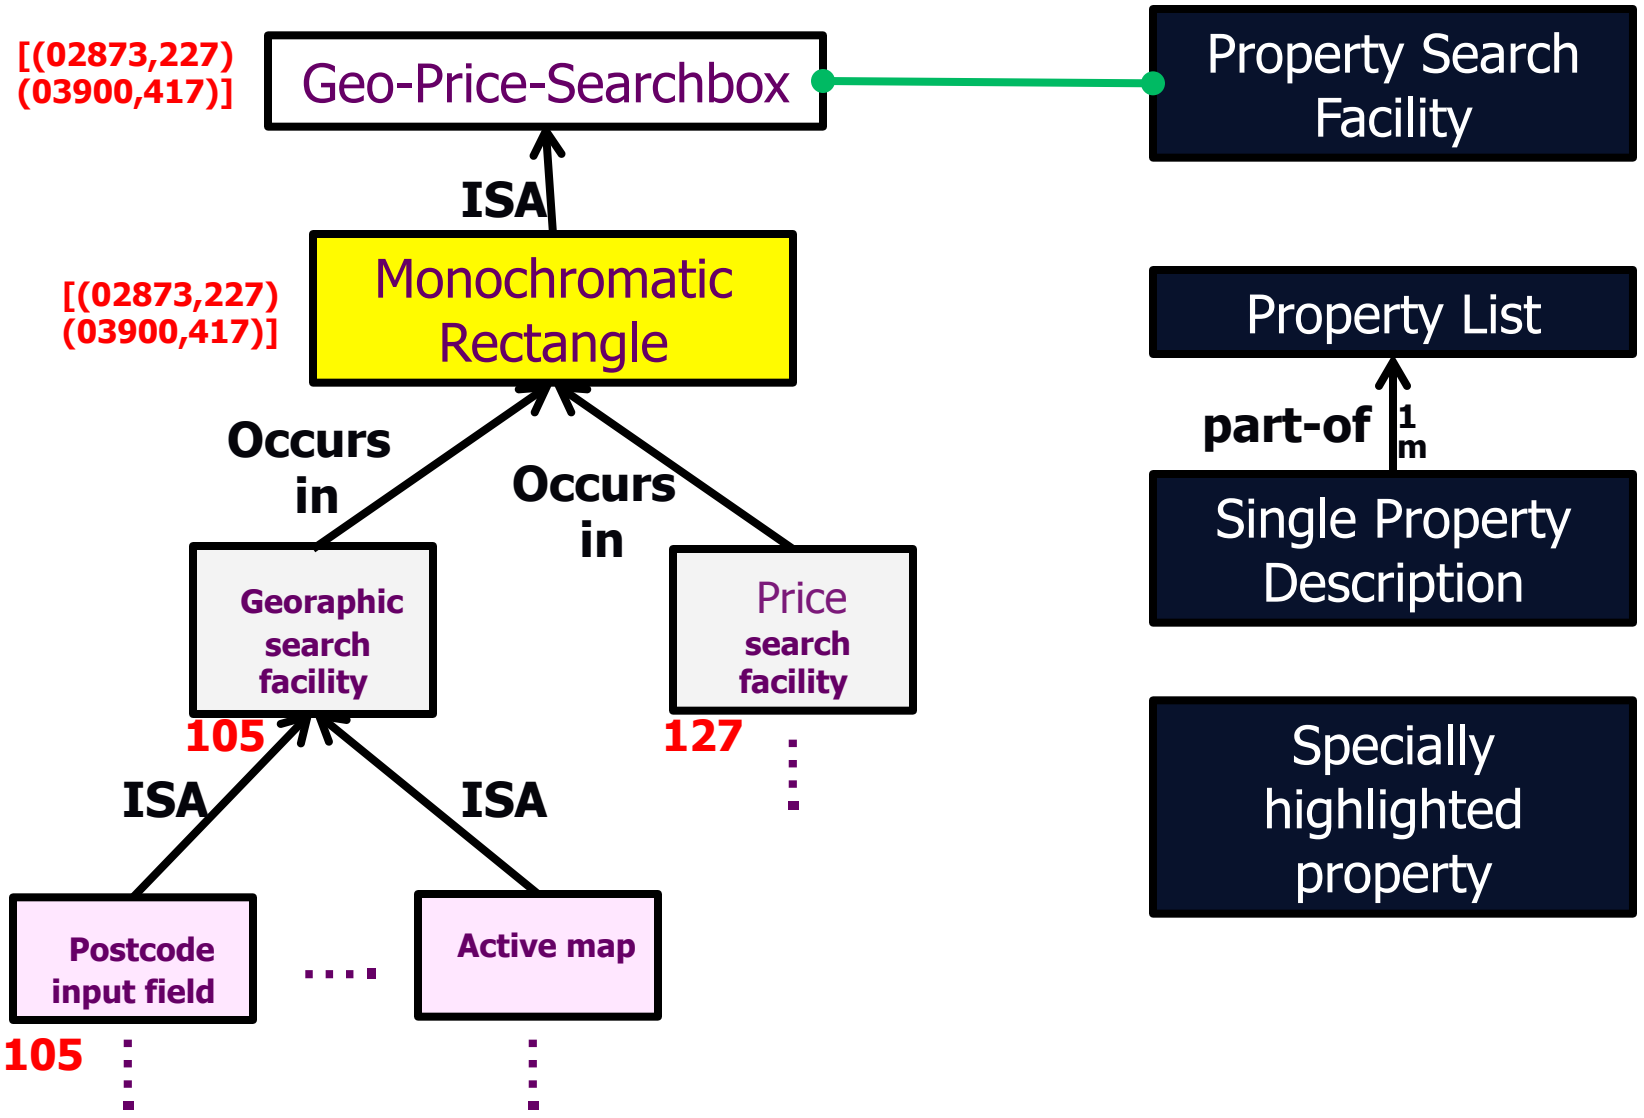


Top-down reasoning

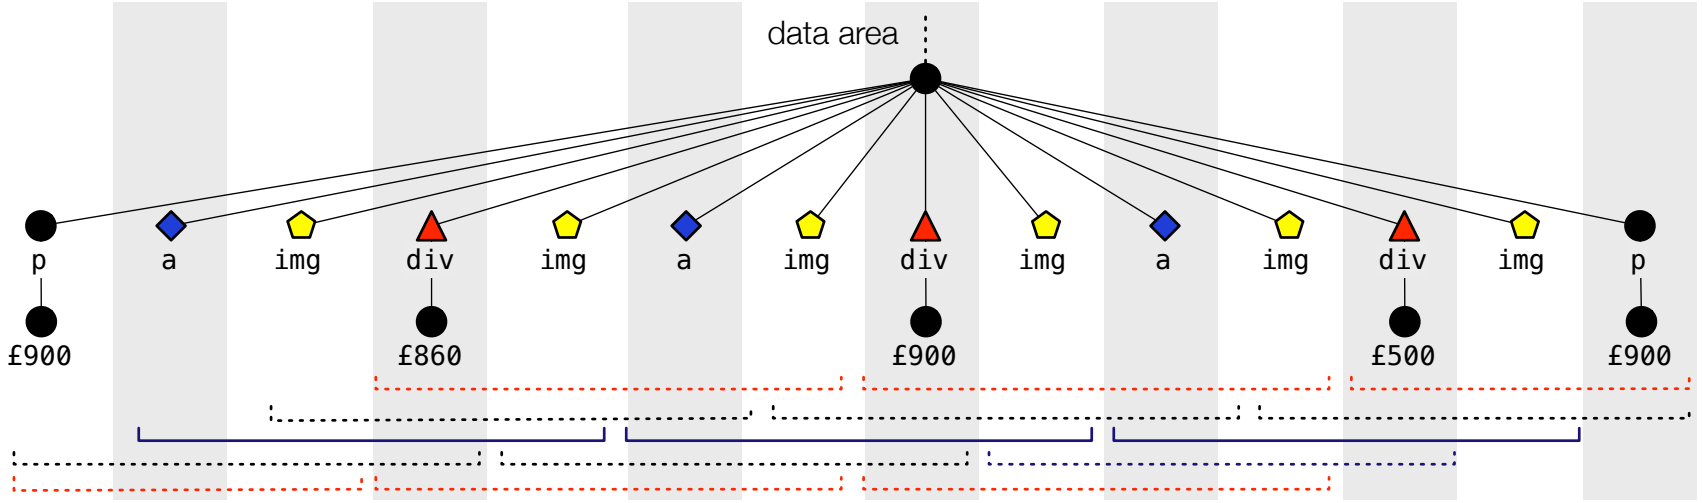


Bottom-up processing Top-down reasoning

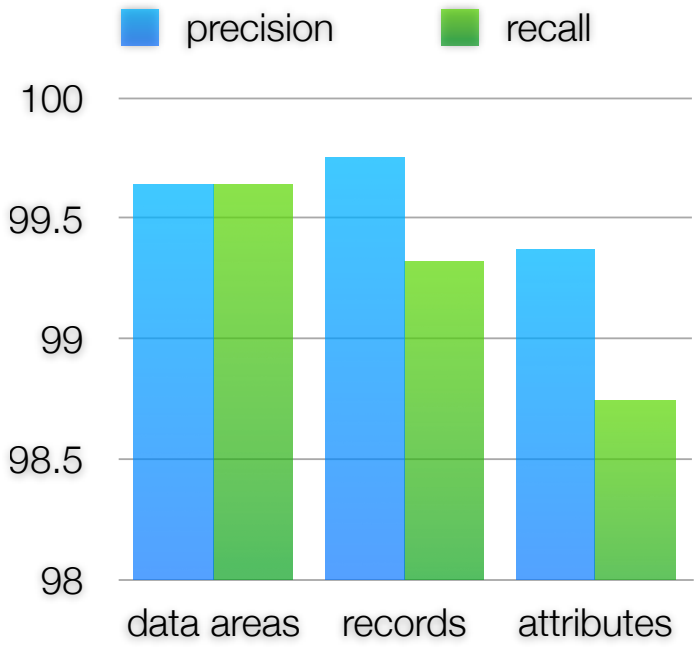
Phenomenology



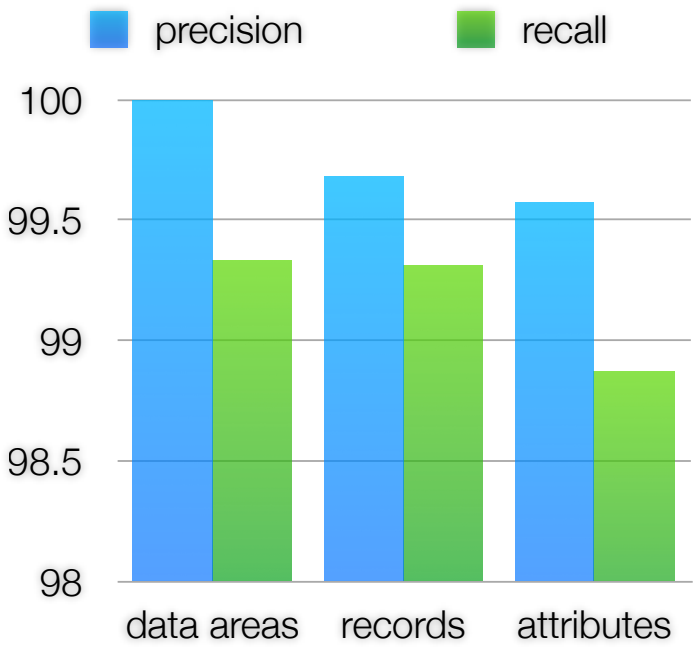
Phenomenological Record Segmentation



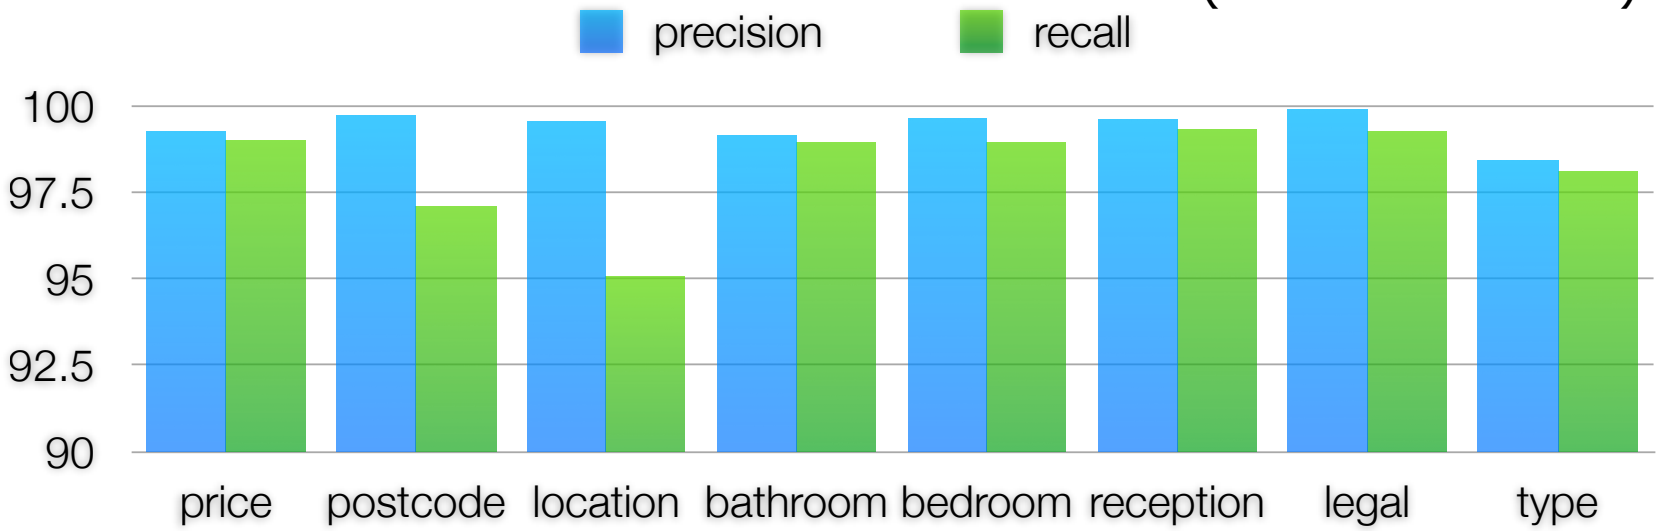
- set of uniform, non-overlapping records
- maximise sequence of evenly segmented (same distance pivot)
- minimise irregularity of records



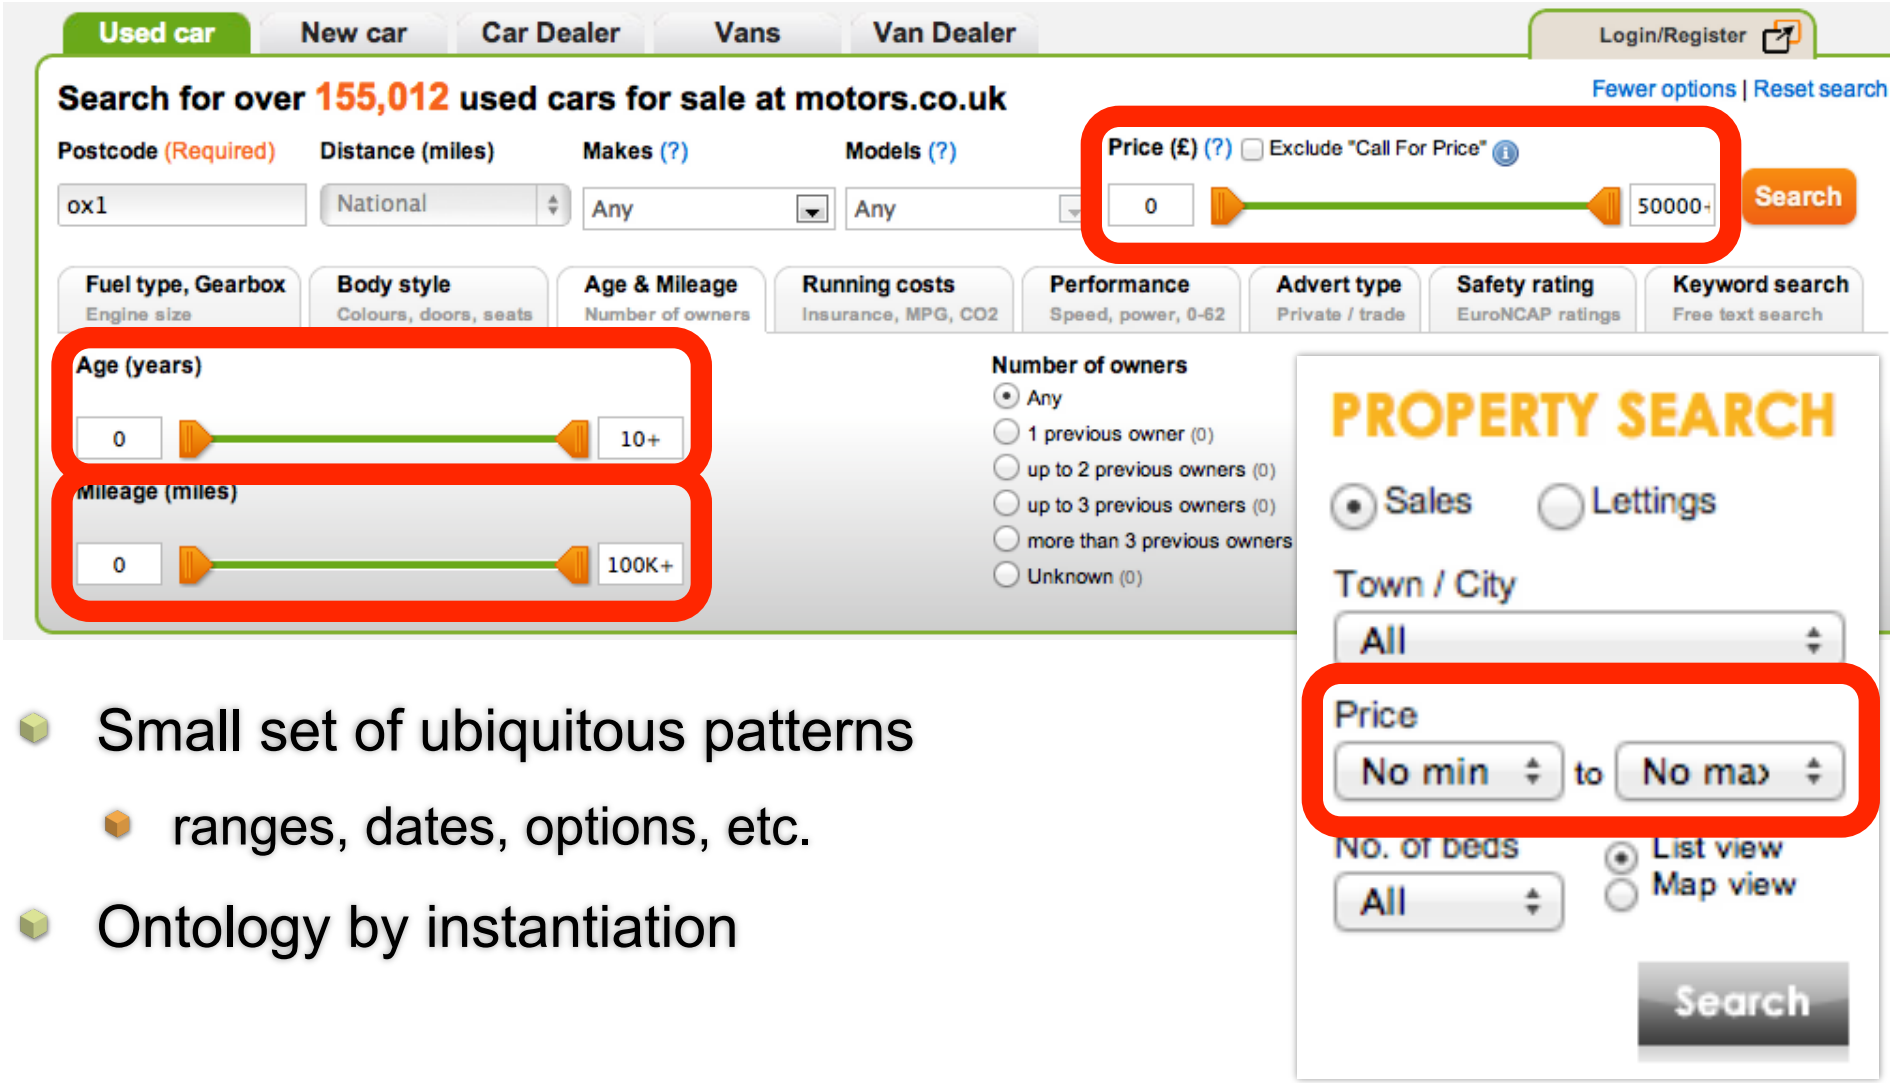
Real Estate
(100 pages)



Used Car
(100 pages)
(voitures d'occasion)



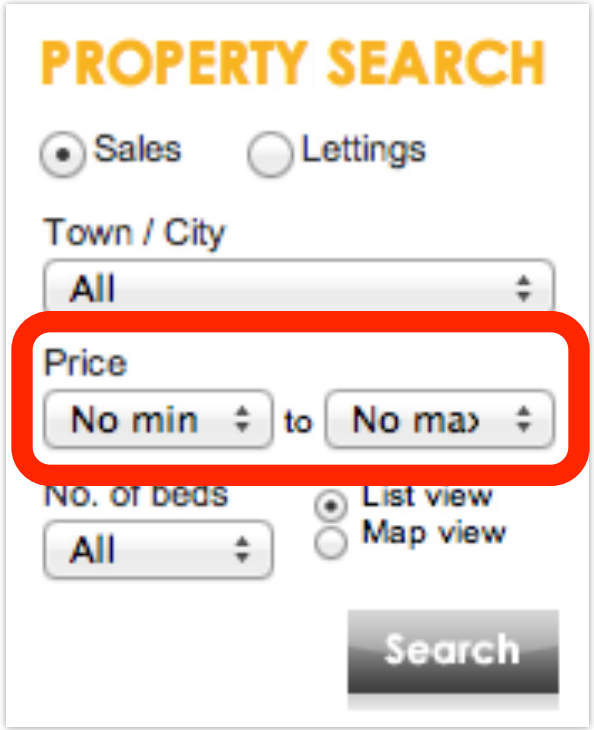
Form Patterns Example



- Small set of ubiquitous patterns
  - ranges, dates, options, etc.
- Ontology by instantiation

OPAL-TL Example

- Price range
  - two successive fields in the same group
  - at least one “price” type
  - range connector in between



$$\texttt{concept<C}_M\texttt{>(N}_2\texttt{)} \Leftarrow \texttt{child(N}_1\texttt{,G),child(N}_2\texttt{,G),follows(N}_2\texttt{,N}_1\texttt{),}$$
$$\texttt{concept<C>(N}_1\texttt{),N}_2\texttt{@}\mathit{range\_connector}\texttt{\{e,d\},}\neg\texttt{(A}_1 \prec A\texttt{, N}_2\texttt{@A}_1\texttt{\{d\})}$$
